

How to Add New Blog Posts - EASY VERSION

Much Better! Each Post is Now Its Own File

Instead of one giant posts.js file, each blog post is now a separate markdown (.md) file.

Your New Workflow:

Step 1: Create a New .md File

In your `src/posts/` directory, create a new file:

```
src/posts/my-new-post-title.md
```

File naming:

- Use lowercase
 - Use hyphens instead of spaces
 - Match your slug
-

Step 2: Add Frontmatter

At the very top of your file, add this (between the `---` markers):

```
markdown
---
id: 5
title: "Your Post Title Here"
slug: your-post-title-here
date: January 26, 2025
category: Career
tags:
  - job search
  - internships
  - career advice
excerpt: "Short description that shows on blog listing page (max 160 chars)"
author: MoreThanOneWay Team
readTime: 5 min read
featured: false
---
```

Important:

- `id`: Increment from your last post (if last post was id: 4, use id: 5)
 - `slug`: Must match your filename (without .md)
 - `category`: Must be exactly "Career", "Academics", or "Mental Health"
 - `tags`: Each tag on its own line starting with `-`
 - `featured`: Only ONE post should be `true` at a time
-

Step 3: Write Your Content

After the second `---`, write your blog post in regular markdown:

```
markdown
---
(frontmatter here)
---

# Your Main Title

Your first paragraph goes here...

## Subheading

More content...

**Bold text**
*Italic text*

- Bullet point
- Another point

[Link to another page](/study-resources)
```

Step 4: Save the File

That's it! The post automatically appears on your blog.

No more editing giant JavaScript files!

Complete Example:

File: `src/posts/time-management-tips.md`

id: 5

title: "5 Time Management Tips That Actually Work in College"

slug: time-management-tips

date: January 27, 2025

category: Academics

tags:

- time management
- productivity
- study tips

excerpt: "Forget the generic advice. These are the time management strategies that actually work when you're overwhelmed."

author: MoreThanOneWay Team

readTime: 4 min read

featured: false

5 Time Management Tips That Actually Work in College

You know those "wake up at 5am and meditate" productivity tips?

Yeah, those don't work when you have 3 exams, 2 papers, and you're already running on 4 hours of sleep.

Here's what actually helps:

1. The "Next 2 Hours" Rule

Don't plan your whole week. Just ask: **"What are the 2 most important things I need to do in the next 2 hours?"**

Do those. Repeat.

When you're overwhelmed, shorter planning windows help.

2. Accept "Good Enough"

****Perfectionism kills productivity.****

A B+ paper submitted on time is better than an A+ paper that's late (or never finished).

Have your own time management tips? [Share them →](/stories)

Deployment:

Once you've added your new .md file:

```
bash  
  
npm run build  
npm run deploy
```

Your new post automatically appears at morethanoneway.org/blog

Why This Is Better:

Before:

- ✗ One giant 892-line posts.js file
- ✗ Hard to find specific posts
- ✗ Markdown inside JavaScript (messy!)
- ✗ Easy to break syntax

Now:

- ✓ Each post is its own file
- ✓ Easy to find and edit
- ✓ Write in actual markdown
- ✓ Can't accidentally break other posts
- ✓ Can edit in any markdown editor
- ✓ Much cleaner!

Your New File Structure:

```
src/  
├── posts/  
│   ├── failing-hardest-class.md    (Post 1)  
│   ├── job-search-reality.md      (Post 2)  
│   ├── mental-health-struggles.md (Post 3)  
│   ├── chosen-family-resources.md (Post 4)  
│   └── your-new-post.md           (Post 5 - just drop it here!)  
├── posts.js                       (Tiny! Just 95 lines now)  
└── BlogPage.jsx
```

— BlogPost.jsx
— BlogCard.jsx

Writing Tips:

Use markdown editors for easier writing:

- **VS Code** (has markdown preview)
- **Typora** (WYSIWYG markdown editor)
- **Google Docs** → Convert to markdown later
- **Obsidian** (if you want to get fancy)

Internal Links:

Use the same format as before:

markdown

[Text here](/study-resources)

[Crisis support](/crisis)

[Stories](/stories)

Markdown Cheat Sheet:

markdown

Heading 1

Heading 2

Heading 3

****Bold text****

Italic text

- Bullet list

- Another item

1. Numbered list

2. Another item

[Link text](/page-url)

> Blockquote

Horizontal line

`inline code`

```

code block

```

? Troubleshooting:

Problem: Post not showing up

Solution: Check frontmatter is between `(---` markers, check id is unique

Problem: Formatting looks wrong

Solution: Check markdown syntax, make sure you have blank lines between sections

Problem: Build fails

Solution: Check for syntax errors in frontmatter (missing quotes, wrong indentation)

🎉 You're Done!

Your old posts.js: 892 lines

Your new posts.js: 95 lines

Much better, right?

Now go write some posts! Just drop new .md files in the posts folder and you're golden. ✨
